

Integrated Inventory & Operational Solution

Integrated ERP & Operational Solution

Streamlining business efficiency with connected modules for setup, partners, production, inventory, reporting, and security.

ERP • OPERATIONS • INVENTORY

System Foundation & Setup

Designed to reduce manual follow-up, improve traceability, and create one reliable operational view.

01 Branch & Location Management

Organize operations by site, department, and working location.

02 Role-based Permissions

Give each user the right access without exposing sensitive modules.

03 Multi-currency Management

Support transactions across currencies with standardized setup.

04 Standardized Code Setup

Keep master data consistent across every operational workflow.

OUTCOME

A clean control layer for branches, users, currencies, and codes.

Partner & Inventory Management

Designed to reduce manual follow-up, improve traceability, and create one reliable operational view.

01 Supplier & Customer Database

Maintain a single trusted source for partner information.

02 Purchase Received (GRN)

Capture inbound goods accurately from receipt to storage.

03 Quality Inspection Module

Build quality checkpoints before materials enter operations.

04 Internal Order Processing

Move requests through the organization with better visibility.

OUTCOME

Connect supplier, customer, receipt, inspection, and order workflows.

Production & Floor Operations

Designed to reduce manual follow-up, improve traceability, and create one reliable operational view.

- 01 Production Tracking**
Monitor work-in-progress and production activity in real time.
- 02 Issue Output & Material Control**
Control materials issued to production and capture outputs.
- 03 Floor Return Material Management**
Record unused or returned materials with clear traceability.
- 04 Tools Stock Tracking**
Track tools availability and usage across floor operations.

OUTCOME

Track production and material movement from issue to return.

Inventory Controls

Designed to reduce manual follow-up, improve traceability, and create one reliable operational view.

01

Warehouse Management

Manage stock across locations with clear warehouse structure.

02

Opening & Closing Records

Control inventory periods with reliable opening and closing data.

03

Real-time Stock Location Tracking

Know where items are and reduce time lost searching stock.

OUTCOME

Improve stock accuracy with visible warehouses, balances, and locations.

Reports & Data Security

Designed to reduce manual follow-up, improve traceability, and create one reliable operational view.

- 01 Stock Statement & Stock Ledger**
View inventory value, balances, and movement history quickly.
- 02 Order Issue Statement & Tools Stock**
Generate operational reports for issue and tools tracking.
- 03 System Backup & Security**
Protect business records with controlled access and backup routines.

Ready to streamline business efficiency.

OUTCOME

Turn operational data into trusted statements with secure backups.
